# Agenda

## Drivers

### Asset Management Case Study

1. What is the current state of my assets?
2. What is my required “sustainable” level of service?
3. Which assets are critical to sustained performance?
4. What are my minimum life cycle costs?
5. What is my best long-term funding strategy?

# Municipal Asset Management Drivers

- Knowledge capture / succession planning
- High property taxes vs. aging infrastructure
- Tax / Rate stabilization
- Capital planning
- Bonding ratings
- Emergency planning and response

# Question #1

## What is the current state of my assets?

- What do I own?
- Where is it?
- What condition is it in?
- What is its remaining useful life?
- What is its remaining economic value?

# What is the current state of my assets?

What do I own? - Where is it?

| Equipment | Description                                      | Location                                  | Department          | Type          |
|-----------|--|---|---------------------|---------------|
| AB-1      | Aeration Blower No. 1 (AB-1)                     | Secondary Process Building - Blower Room  | Secondary Treatment | Blower        |
| AB-1 MOT  | Aeration Blower No. 1 Motor                      | Secondary Process Building - Blower Room  | Secondary Treatment | Motor         |
| AB-2      | Aeration Blower No. 2 (AB-2)                     | Secondary Process Building - Blower Room  | Secondary Treatment | Blower        |
| AB-2 MOT  | Aeration Blower No. 2 Motor                      | Secondary Process Building - Blower Room  | Secondary Treatment | Motor         |
| AB-3      | Aeration Blower No. 3 (AB-3)                     | Secondary Process Building - Blower Room  | Secondary Treatment | Blower        |
| AB-3 MOT  | Aeration Blower No. 3 Motor                      | Secondary Process Building - Blower Room  | Secondary Treatment | Motor         |
| AB-4      | Aeration Blower No. 4 (AB-4)                     | Secondary Process Building - Blower Room  | Secondary Treatment | Blower        |
| AB-4 MOT  | Aeration Blower No. 4 Motor                      | Secondary Process Building - Blower Room  | Secondary Treatment | Motor         |
| AB-5      | Aeration Blower No. 5 (AB-5)                     | Secondary Process Building - Blower Room  | Secondary Treatment | Blower        |
| AB-5 MOT  | Aeration Blower No. 5 Motor                      | Secondary Process Building - Blower Room  | Secondary Treatment | Motor         |
| AC-1      | Air Conditioner (AC-1)                           | Administration Building - Bacterial Lab   | HVAC                | HVAC          |
| AC-2      | Air Conditioner (AC-2)                           | Administration Building - Outdoors        | HVAC                | HVAC          |
| AC-3      | Air Conditioner (AC-3)                           | Administration Building - Wastewater Lab  | HVAC                | HVAC          |
| ADM-FAP   | Administration Building Fire Alarm Control Panel | Administration Building - Lobby           | Safety              | Control Panel |
| ADM-PB    | Administration Building - Phone Board            | Administration Building - Mechanical Room | Computer            | Control Panel |
| ADP-1     | Aeration Tank Dewatering Pump (ADP-1)            | Secondary Process Building - Pump Gallery | Secondary Treatment | Pump          |
| AFM-1     | Air Flow Meter - 1                               | Aeration Tanks - Aeration Tank No. 1      | Secondary Treatment | Meters        |
| AFM-2     | Air Flow Meter - 2                               | Aeration Tanks - Aeration Tank No. 2      | Secondary Treatment | Meters        |
| AFM-3     | Air Flow Meter - 3                               | Aeration Tanks - Aeration Tank No. 3      | Secondary Treatment | Meters        |
| AFM-4     | Air Flow Meter - 4                               | Aeration Tanks - Aeration Tank No. 4      | Secondary Treatment | Meters        |
| AHU-1     | Air Handling Unit No. 3 (AHU-3)                  | FST Complex (Building) - Electrical Room  | HVAC                | HVAC          |

# Information needed on my assets?

## Information for Asset Management

- Consequence of Failure
- Current Condition
- % Redundancy
- Installation Date
- Expected Life
- Replacement Cost

Equipment Entry

Equipment # AB-1

Description Aeration Blower No. 1 (AB-1)

Priority Medium (2)

Equip. Type Blower

Department Secondary Treatment

Location Secondary Process Building - Blower Room

Metered ☐

# Asset Expected Life Guidelines

| Asset Type                     | Estimated Useful Life |
|--------------------------------|-----------------------|
| Buildings                      | 37.5                  |
| Charger                        | 12.5                  |
| Computer Equipment / Software  | 5                     |
| Concrete & Metal Storage Tanks | 45                    |
| Disinfection Equipment         | 10                    |
| Distribution Pipes             | 37.5                  |
| Door                           | 37.5                  |
| Galleries and Tunnels          | 35                    |
| Hydrants                       | 45                    |
| Hydropneumatic Tanks           | 10                    |
| Intake Structures              | 40                    |
| Lab / Monitoring Equipment     | 6                     |
| Land                           | 300                   |
| Meters                         | 12.5                  |

| Asset Type                          | Estimated Useful Life |
|-------------------------------------|-----------------------|
| Motor Controls / Drives             | 10                    |
| Pressure Pipework                   | 60                    |
| Pumping Equipment                   | 10                    |
| Security Equipment                  | 7                     |
| Sensors                             | 8.5                   |
| Service Lines                       | 35                    |
| Sewers                              | 100                   |
| Tools and Shop Equipment            | 12.5                  |
| Transformers / Switchgears / Wiring | 20                    |
| Transmission Mains                  | 37.5                  |
| Transportation Equipment            | 10                    |
| Treatment Equipment                 | 12.5                  |
| Valves                              | 30                    |
| Wells and Springs                   | 30                    |

## What do I own? - Where is it?

# What is the current state of my assets?

## What condition is it in?

# Condition Assessment Protocols (CAP's)

# Which assets?

# What information?

## How used?

**CAP 1 - A simple scoring system:  
“good, fair, poor” or 1-5 or**

**1-10**  
**CAP 2**      -      **A matrix scoring system with multiple distress factors and weightings to derive a score**

**CAP 3 - Use of sophisticated techniques to determine the “residual life to intervention” or end of physical life**

# What is the current state of my assets?

## What is its remaining useful life?

## **Question #2**

**What is my required level of service?**

- **What is the demand for my services by my stakeholders?**
- **What do regulators require?**
- **What is my actual performance?**

# Why LOS?

It helps us...

- **Concentrate (focus) efforts & resources**
  - On agreed on service levels
  - Less “service level defined by notion”
- **Communicate service expectations and choices**
  - Increased service = increased costs
  - Discussion of trade-offs & risks
- **Negotiate (regulators and council/commission/board)**
  - Service levels
  - Costs & budgets
  - Rate impacts
  - Reinvestments for Renewal
  - Level of Risk

# The Management Model

Customer  
Expectations

Cost  
of Service

Level  
of Service

Business  
Risk

**Balance**

# What is my required level of service?

| Level of Service                           | Target                              |
|--|-------------------------------------|
| Employee health and safety                 | Zero Injuries                       |
| Competitive rates / taxes                  | Within 5% of New York State average |
| Public image                               | No adverse media reports            |
| Compliance with effluent discharge permits | 100%                                |

# LOS statement

## ENVIRONMENTAL

| Key Performance Indicators  | 2005 Target Level of Service  |
|---|---|
| <b>1. OCSD will comply with effluent quality standards.</b>   |   |
| a. Compliance with all Ocean Discharge Permit Limits, %   | 100%  |
| b. Concentration of Emerging Chemical Constituents of Concern, NDMA < 150 ppt<br>Plant No. 1 Secondary Effluent | 1,4 Dioxane <2ppb   |
| c. Effluent total coliform bacteria after initial dilution, mpn   | <1,000  |
| d. Source Control permittee compliance with permit conditions, percent  | >90%  |
| <b>2. OCSD will manage flows reliably.</b>  |   |
| a. Frequency of use of emergency 1mile outfall  | 0 per year during dry weather<br>< once per 3 years in peak wet weather |
| b. Sanitary sewer spills per 100 miles  | < 2.1   |
| c. Contain sanitary sewer spills within 5 hours   | 100%  |
| <b>3. OCSD's effluent will be recycled.</b>   |   |
| a. Treated effluent reclaimed, % (flow)   | 4% (10 mgd)   |
| <b>4. OCSD will implement a sustainable biosolids management program.</b>                                       |   |
| a. National Biosolids Program Certification for Environmental Management System                                 | Maintain  |
| b. Percent of biosolids beneficial reuse  | 100%  |
| Class "B"   | 40%   |
| Class "A/EQ"  | 60%   |
| <b>5. OCSD will improve the regional watershed.</b>   |   |
| a. Dry weather urban runoff collected and treated   | 4 mgd   |
| b. Rainfall induced inflow and infiltration, wet weather peak factor <2.2                                       |   |
| c. Stormwater management, % of treatment process area runoff treated on site                                    | 100%  |
| d. Per capital wastewater flow rate, gallons per person per day   | <105  |
| <b>6. OCSD will protect the air environment.</b>  |   |
| a. Odor complaints: Reclamation Plant No. 1<br>Treatment Plant No. 2<br>Collection System                       | 5<br>4  |
| b. Air emissions health risk to:<br>Community, cancer risk per 1 million<br>Employees                           | <25<br><25  |
| c. Air mass emissions permit compliance, %  | 100%  |

## SOCIAL

| Key Performance Indicators  | 2005 Target Level of Service |
|---|------------------------------|
| <b>1. OCSD will be a good neighbor and will be responsive to its customers.</b>                   |                              |
| a. Off site Biosolids nuisance complaints   | 0                            |
| b. Odor complaint response  |                              |
| Treatment Plants within 1 hour  | 100%                         |
| Collection System within 1 working day  | 100%                         |
| c. Restore collection service to customer within 8 hours  | 100%                         |
| d. Respond to public complaints or inquiries regarding construction projects within 1 working day | >90%                         |
| e. Respond to collection system spills within 1 hour  | 100%                         |
| f. New connection permits processed within one working day  | >90%                         |
| g. Dig Alert response within 48 hours   | 100%                         |
| <b>2. OCSD will provide public access to OCSD information.</b>                                    |                              |
| a. Public Records Act requests within 10 working days   | 100%                         |
| b. Post Board/Committee Agenda Packages 72 hours prior to meeting                                 | 100%                         |
| c. Post studies and reports on OCSD website within 1 week of receive/file.                        | 100%                         |
| <b>3. OCSD will take care of its people.</b>  |                              |
| a. Training hours per employee  | 45                           |
| b. Employee Injury Incident Rate  | <3.75                        |

## ECONOMIC

| Key Performance Indicators  | 2005 Target Level of Service                                  |
|---|---|
| <b>1. OCSD will exercise sound financial management.</b>                            |   |
| a. New borrowing  | Not more than annual Capital Improvement Program requirements |
| b. COP coverage ratio   | Between 1.25 and 2.0  |
| c. COP service Principal and Interest   | < than O&M expenses   |
| d. Annual SFR user fee increase   | not more than 15%   |
| e. Annual user fees   | Sufficient to cover O&M requirements                          |
| f. Annual increase in collection, treatment, and disposal costs per million gallons | < 10%   |
| g. Annual variance from adopted reserve policy                                      | <5%   |

## Question #3

**Which assets are critical to sustained performance?**

- How does it fail?
- What is the risk?
- What does it cost?
- What are the consequences of failure?

**RISK**

# Which assets are critical to sustained performance?

## Consequence of Failure

- 1. Spill, Flood, Odor**
- 2. Water or Effluent Quality**
- 3. Regulatory Compliance**
- 4. Loss of Service to Customers**
- 5. Equipment and Safety**
- 6. Economic Impact**

### Scoring Criteria

**2 - Insignificant**

**4 - Minor**

**6 - Moderate**

**8 - Major**

**10 - Catastrophic**

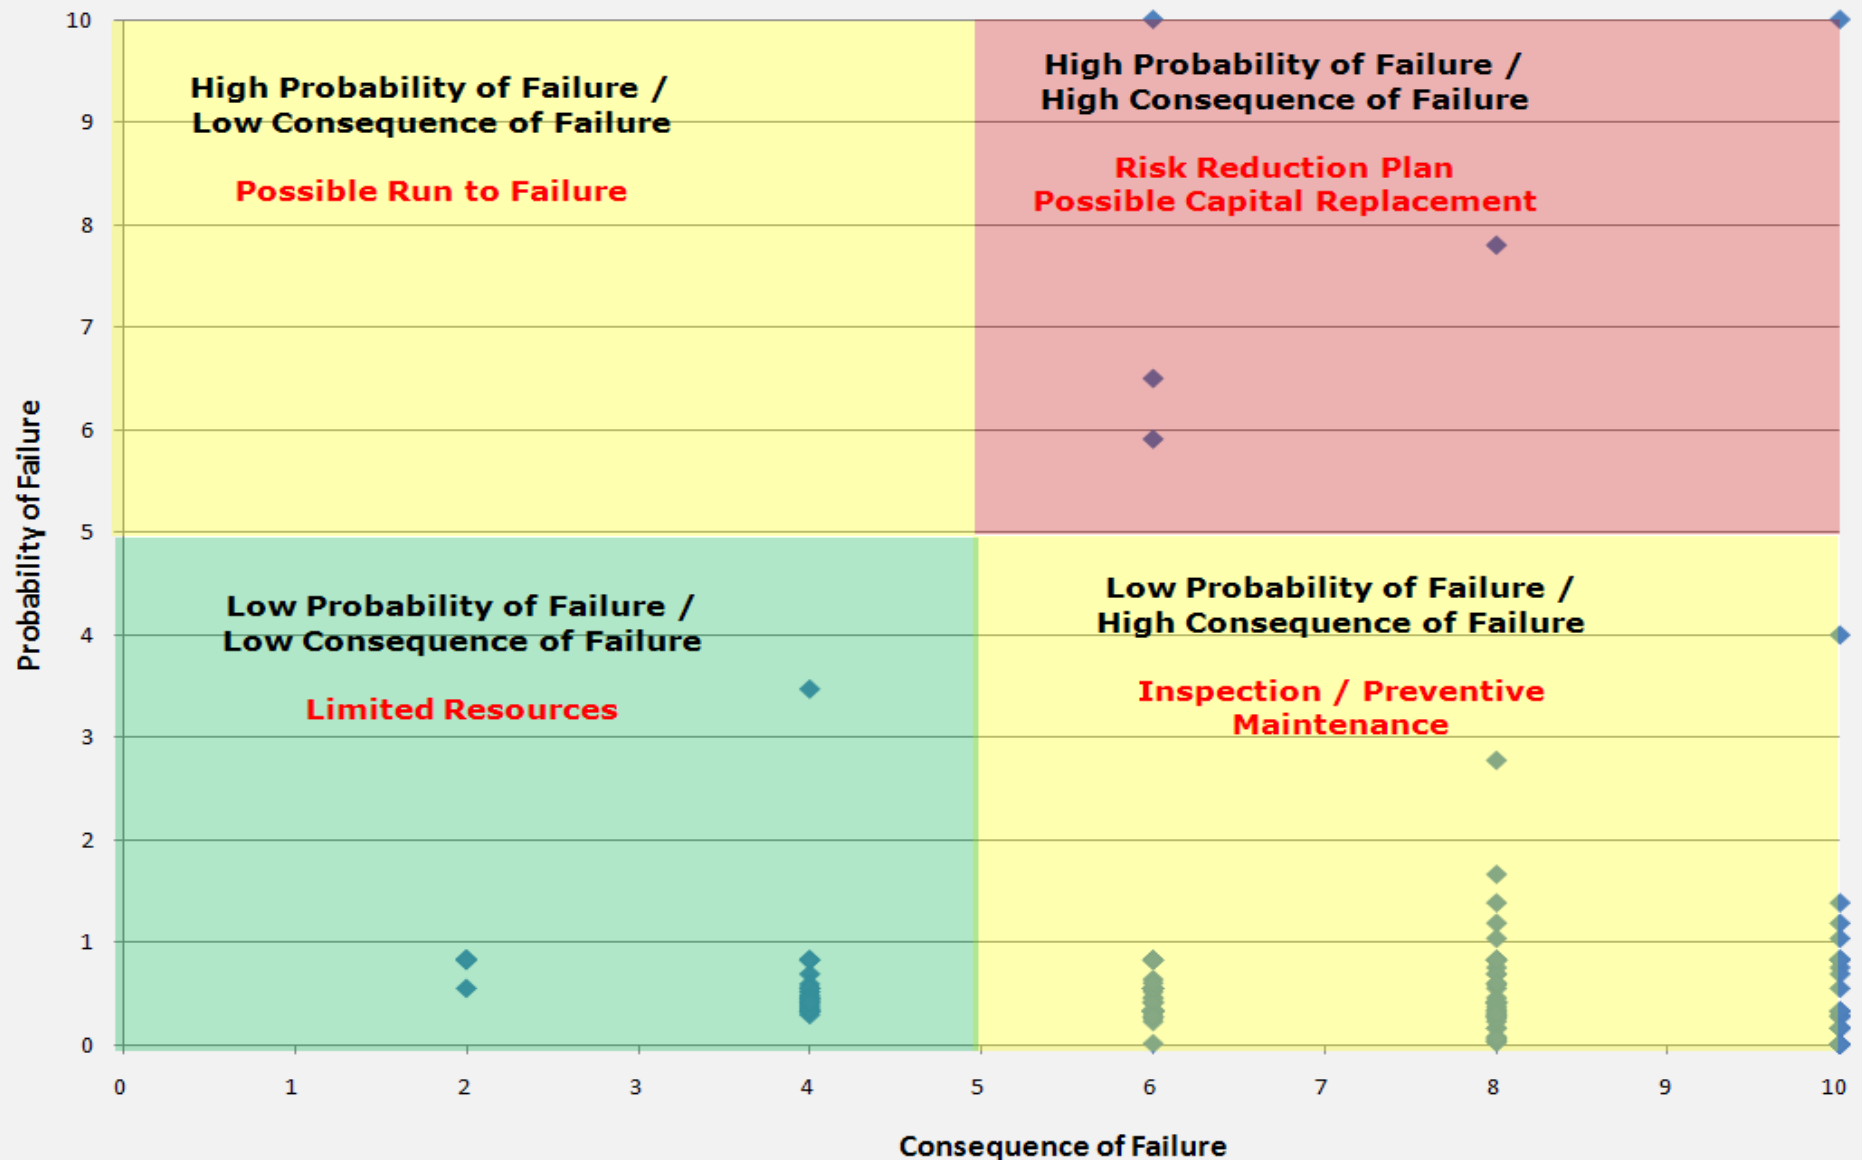

# Which assets are critical to sustained performance?

| Description   | Remaining Life | Life (Range) | Replacement Date | Replacement Costs (Inflated) | Consequence of Failure | Probability of Failure | Risk  |
|---|----------------|--------------|------------------|------------------------------|------------------------|------------------------|-------|
| MCC-1   | -9.84          | 0 - 5        | 7/2/99           | \$ 7,000.00                  | 6                      | 13.36                  | 80.14 |
| Golf Course Irrigation Pump                           | -0.09          | 0 - 5        | 4/1/09           | \$ -                         | 8                      | 9.99                   | 79.93 |
| Air Incubator   | -1.09          | 0 - 5        | 4/1/08           | \$ 1,000.00                  | 4                      | 12.50                  | 50.02 |
| Dissolved Oxygen Meter & Probe                        | 1.99           | 0 - 5        | 5/1/11           | \$ 2,000.00                  | 6                      | 8.27                   | 49.61 |
| TSS Analyzer  | -0.34          | 0 - 5        | 1/1/09           | \$ 1,000.00                  | 4                      | 11.47                  | 45.87 |
| Analytical Balance                                    | -0.34          | 0 - 5        | 1/1/09           | \$ 2,000.00                  | 4                      | 11.47                  | 45.87 |
| Floor Mounted Main Aeration Sy                        | 7.66           | 10 - 15      | 1/1/17           | \$ 6,000.00                  | 8                      | 5.73                   | 45.84 |
| Secondary Process Building - Fire Alarm Control Panel | 6.66           | 10 - 15      | 1/1/16           | \$ 2,000.00                  | 8                      | 5.25                   | 42.02 |
| UV Disinfection System                                | 6.66           | 10 - 15      | 1/1/16           | \$ 37,000.00                 | 8                      | 5.25                   | 42.02 |

# Which assets are critical to sustained performance?

Risk Matrix - Collection System Assets

# Four Major *Failure Modes*

| Failure Mode                | Definition  | Tactical Aspects  | Management Strategy       |
|-----------------------------|---|---|---------------------------|
| <b>Capacity</b>             | Volume of demand exceeds design capacity                        | Growth, system expansion  | Redesign                  |
| <b>Level of Service</b>     | Functional requirements exceed design capacity                  | Codes & permits: NPDES, CSOs, OSHA, noise, odor, life safety; service, etc.         | O&M optimization, renewal |
| <b>Mortality</b>            | Consumption of asset reduces performance below acceptable level | Physical deterioration due to age, usage (including operator error), acts of nature | O&M optimization, renewal |
| <b>Financial Efficiency</b> | Operations costs exceed that of feasible alternatives           | Pay-back period   | Replace                   |

# Which assets are critical to sustained performance?

## Consequence by LOS Category

| Consequence Category                    | Weight | Negligible = 1                        | Low = 4   | Moderate = 7   | Severe = 10   |
|---|--------|---------------------------------------|---|--|---|
| Health & Safety                         | 0.20   | No injuries or adverse health effects | No lost-time injuries or medical attention            | Lost-time injury or medical attention                            | Loss of life  |
| Compliance with Regulation              | 0.20   | 100% compliance with permits          | Technical violation but no enforcement action         | Violation with minor enforcement action                          | Enforcement action with fines                               |
| Financial Impact                        | 0.10   | Absorbed within budget line item      | Absorbed within current budget                        | May require transfer from reserves                               | May require new borrowing or impact rates                   |
| Disruption to the Community             | 0.15   | No social or economic impact          | Minor disruption (e.g., traffic, dust, noise)         | Short-term impact; substantial disruption                        | Long-term impact; area-wide disruption                      |
| Service Delivery                        | 0.20   | No overflows, backups, or odors       | No dry weather overflows or backups; infrequent odors | Short duration dry weather overflows or backups; occasional odor | Numerous overflows, backups; widespread or persistent odors |
| Ability to Respond and Continue Service | 0.15   | < 2 hours                             | 2 to < 8 hours  | 8 to < 24 hours  | > 24 hours  |

# Sample Likelihood of Failure Matrix and Scoring System

## Likelihood of Asset Failure by Category

| Likelihood Category   | Weight | Negligible = 1   | Unlikely = 2  | Possible = 4   | Likely = 7   | Very Likely = 10                              |
|---|--------|--|---|--|--|---|
| <b>Physical Condition</b>   | 0.60   | Very good<br>(Condition Grade 1)   | Good<br>(Condition Grade 2)                                     | Fair (Condition Grade 3)   | Poor (Condition Grade 4)   | Very poor<br>(Condition Grade 5)              |
| <b>Performance</b>  | 0.20   | Sufficient capacity to meet average and peak flow requirements; appropriate utilization and function | Under-utilized or oversized, causing O&M issues                 | Sufficient capacity but does not meet functional requirements or over-utilized | Able to meet current average capacity demands but not peak demands   | Unable to meet current average capacity needs |
| <b>O&amp;M Protocols</b>  | 0.05   | Complete, up-to-date written/online, easily accessible   | Complete, written/online, up-to-date, but not easily accessible | Written/online but not complete, not up-to-date, or not easily accessible      | Written/online but not complete, out-of-date, or location is unknown | None  |
| <b>Reliability: Planned maintenance as a % of total maintenance</b> | 0.15   | > 75%  | 50% to 75%  | 35% to 50%   | 25% to 35%   | < 25%   |

## **Question #4**

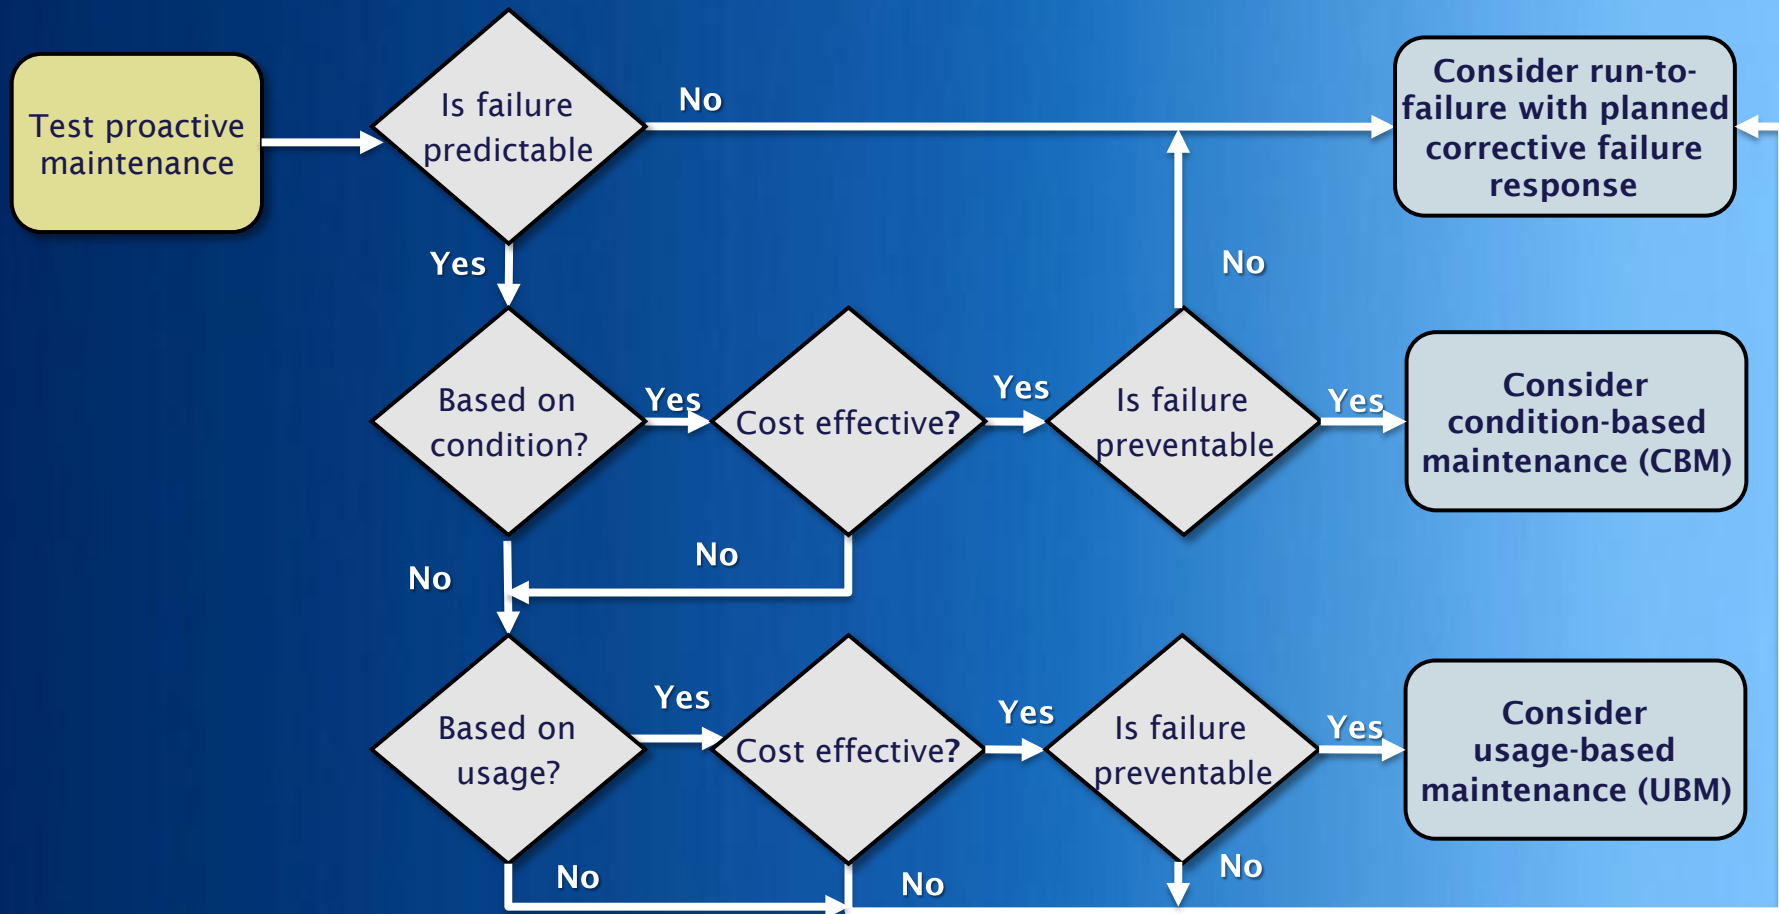

**What are my best O&M and CIP investment strategies?**

- **What alternative management options exist?**
- **Which are the most feasible for my organization?**

# Determine Proactive Maintenance Strategy

# What are my best O&M and CIP investment strategies?

**Instructions**

Verdana 10 B I U

1. Inspect the oil condition after startup and each oil change.
2. Inspect the stator casing for damage or wear.
3. Inspect the mechanical seals for damage or wear.
4. Inspect the pump bearings for damage or wear.
5. Inspect the power and sensor cables for damage or wear. Replace immediately if damage or wear is detected.
6. Inspect the impeller for damage or wear. Replace as required.

3. Slowly pour hydraulic fluid into funnel and continue filling reservoir until full.

CAUTION: Use a Trojan approved hydraulic fluid. Please refer to Material Safety Data Sheets in MSDS Appendix for details.

# What are my best O&M and CIP investment strategies?

## Risk Reduction Opportunities

- 1. Capital rehabilitation**
- 2. Capital replacement**
- 3. Changes to operating procedures**
- 4. Changes to maintenance procedures**
- 5. Demand management**
- 6. Reduction of level(s) of service**
- 7. Improvement in response or recovery**

# Total Projected Costs

# What are my best O&M and CIP investment strategies?

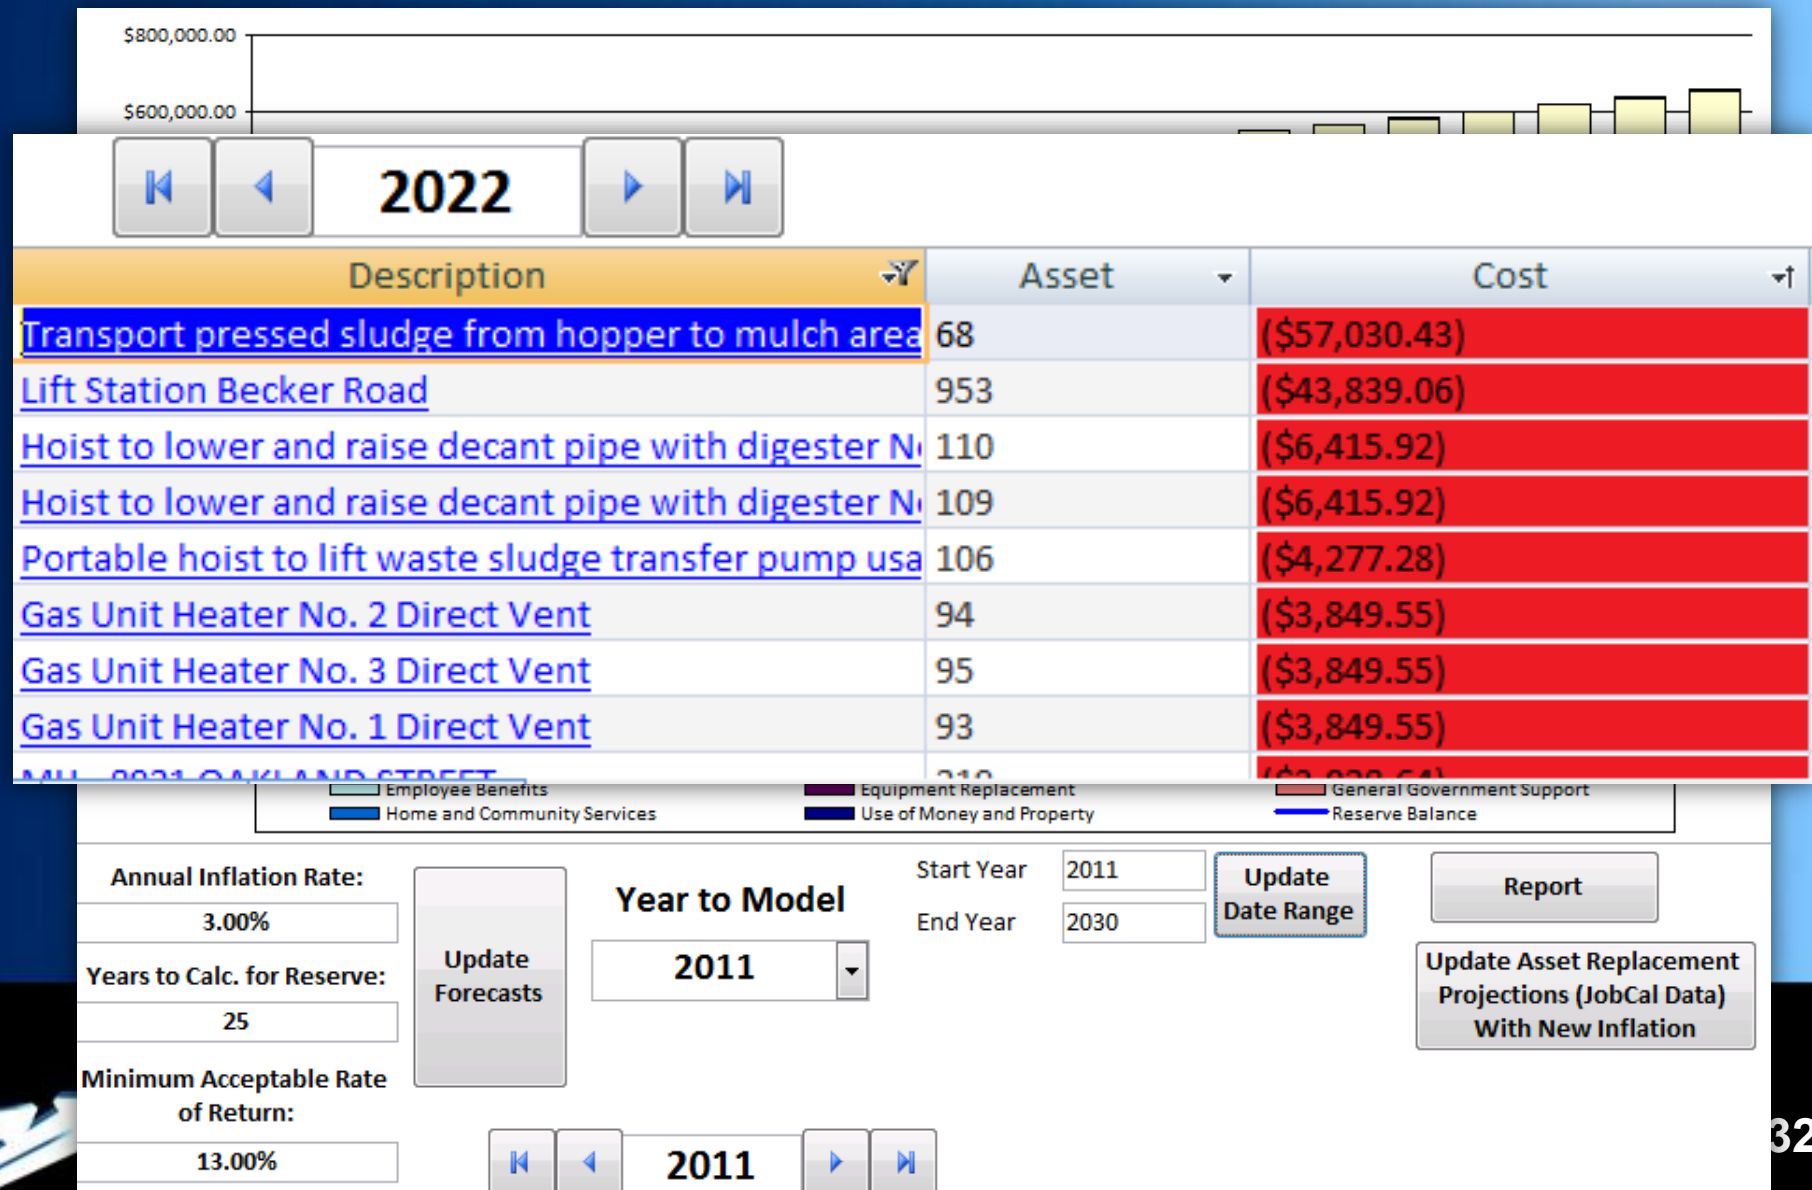

## Question #5

# What is my best long-term funding strategy?

# What is my best long-term funding strategy?

# Is the rate structure sustainable?

- Rates finance essential water and sewer services and ensure clean, safe drinking water.
- Assess the costs of providing water and sewage services, and to recover the amount of money needed to operate and maintain them.

# Projected Rates Over Time by Scenario

# An Asset Management Program Is All About Knowledge Management
